

## **ABSTRACT OF THE DISCLOSURE**

A bottle cap assembly includes a spout member mounted to a bottle and includes a shank. A passage is defined through the spout member and a seal member is located in an opening in a distal end of the spout member. A cap is movably  
5 mounted to the distal end of the shank and has a hole defined therethrough which has a stepped inner periphery. The seal member is disengageably engaged with the hole. An operation member is movably mounted to the shank and the cap is engaged with the operation member such that when pulling the operation member, the cap is pulled away from the sealing member. The operation member has a volume which is  
10 larger than that of the cap.
